"PAM" Portable Anesthesia System

The "PAM" is engineered to be lightweight, portable, versatile and easy to operate. Investigators and practitioners can easily carry this balanced device from room to room or even out into the field for special procedures. The "PAM" is designed for use with non-rebreathing systems including our Universal Control Arm.

Small Footprint
Less than one square foot.

Easily Carried
"PAM" handle is designed to balance the weight of the device when carried.

Designed for Use in Small Areas
Can be used on a table top, in a fume hood or other space challenged work areas.

Universal Control Arm Compatible
This non-rebreathing system installs easily on the "PAM" and expands the capability of this portable device.
